Phonology

Consonants

	Labial	Dental	Alveolar	Palatal	Velar	Glottal
Nasal	m mm [m̥] my [mʲ] mw [mʷ]		n nn [n̥] ny [nʲ] nw [nʷ]		ng [ŋ] ngw [ŋʷ]	
Stop	p b		t d	h ¹ [ç]	k g	
Fricative	f v	th [θ] dh [ð]	s z sj [sʲ]		gw [ɣʷ]	h hy [hʲ] hw [hʷ]
Approxima nt	w		l ll [l̥] ly [lʲ] lw [lʷ]			
Trill			r ² ry [rʲ] rw [rʷ]	j ¹		
Tap			r ² [ɾ]			

1. <h> is pronounced as /ç/ before /i/, /ɪ/, and /j/ (/h/ and /ç/ are allophones).
2. <r> is pronounced as /r/ finally, and /ɾ/ elsewhere (/r/ and /ɾ/ are allophones).

Vowels

	Front	Center	Back
Closed	y [i]		u
Near Closed	i ² [ɪ]		
Closed/Mid	ei ² [e]		
Mid		ə	o ³
Open Mid	e ² [ɛ]		o ³ [ɔ]
Open			a [ɑ]

1. <i> is pronounced /i/ finally and before vowels, /r/, and /ɾ/, and /ɪ/ everywhere else.
2. <e> is pronounced /e/ finally and before vowels, /r/, and /ɾ/, and /ɛ/

¹ In some orthographies /j/ is written as <y>, since it can be determined from context whether <y> represents /i/ or /j/.

everywhere else.

3. <o> is pronounced /ɔ/ before /r/ or /r/ (/o/ and /ɔ/ are allophones).

Diphthongs

Tamalin has three diphthongs, [ɑɪ], [ɑu] and [ui], written <ai>, <au>, and <ui> respectively.

vaine /vaine/ 'fire'

aure /aure/ 'hall'

luite /luite/ 'feather'

Syllable Structure

Tamalin has the relatively restrictive syllable structure (C)V(C), by which palatalized (C^j) and labialized (C^w) consonants are classified as a single constant unit, while syllabic consonants behave as two. For example, the word *lja* [l^jɑ] would be classified as CV, and *lammor* (lɑmɔr) would be classified as CVCCVC. Words need not have any consonants, such as *aie* 'heaven' (/ɑje/ from *aje).

Stress Rules

In Tamalin, stress can be regular or irregular. The rule for regular stress dictates that stress always falls on the last syllable, unless the word ends in a vowel, in which case the stress falls on the second to last syllable. Syllabic consonants never take stress unless they constitute the only valid syllable in the word, when the word ends in a vowel: *mme* /'mɛ/ ('clear').

Irregular stress is denoted with an acute accent over the central vowel of the stressed syllable (á, é, í, ó, ú, ý). In diphthongs, the acute accent is over the first vowel (ái, éi, úi, áu), unless it splits the diphthong. Regular stress is not denoted with an accent except in proper names, where appropriate.

Syllabic Consonants

In Tamalin certain consonants (l, n, and m) can be syllabic. A syllabic consonant is denoted by doubling the letter² (ll, nn, and mm). Any syllabic consonant is treated as a complete CVC syllable, and may not be preceded or followed directly by a consonant. It may however be palatalized or labialized (denoted by a trailing <j> or <w>).

<mm> → /m̩/
lammor → /lɑmɔr/

<nn> → /n̩/
dannor → /dɑnɔr/

<ll> → /l̩/
millor → /m̩lɔr/

² In certain orthographies, syllabic /l/ is an exception, and is sometimes denoted as an l with a stroke (ł).

Internal Sandhi

Sandhi is common between morpheme boundaries. Vowel mutation generally affects unstressed vowels directly preceding a suffix, where the following rules apply:

/e/ → /ɛ/
wei + -tar → wetar
/we/ + /tar/ → /wɛtar/

stressed /i/ → stressed /i/
jení + -tar → jenítar
/jɛn'i/ + /tar/ → jɛn'itar

Generally, changes aren't reflected in spelling.

Consonant mutation occurs much less frequently, but is present. Consonants directly preceding nasals and liquids at morpheme boundaries generally assimilate and produce long /l/, /n/, or /m/. Generally these changes are reflected in spelling. For example:

vien + -mja → viemmja
/viɛn/ + /m^ja/ → /viɛmja/

vien + -lja → viellja
/viɛn/ + /l^ja/ → /viɛl^ja/

The singular exception is /l/, which does not assimilate before /n/ or /m/.

enyl + mja → enylmja
/ɛnil/ + /m^ja/ → /ɛnilm^ja/

Nouns

Tamalin nouns decline only for case, never for number or gender³. Noun phrases in the Tamalin language are generally head left. Noun phrases are composed from the following template:

noun [plurality] [specifiers] [adjectives] [other modifiers]

where “other modifiers” may indicate any other modifier, such elements as a relative clause.

Plurality

A noun is marked as plural when it is followed by the particle word *mil*, which indicates plurality. The only exceptions are the personal pronouns, where contractions are often used⁴. Plural nouns for which a specific number is specified may or may not be marked with *mil*.

ira ‘river’ →

ira mil ‘rivers’

ira (mil) kel ‘three rivers’

Case

Tamalin nouns are inflected for case via a collection of suffixes. Most suffixes have alternate forms to be appended to a vowel or consonant final root. When uninflected for case, a noun is considered to be in nominative form.

Suffix	Case/Meaning
-(t)ar	Genitive: denotes possession, grouping, or composition quetar → 'of the sea' quinar → 'of the world'
-(s)en	Locative: denotes movement into or towards quesen → 'into the ocean' arimen → 'Toward the face'
-(l)uir	Ablative: denotes origin, source, or movement from Tamélinuir → 'From Tamalin'

3 Historically Tamalin nouns were declined for gender (animacy), though this is no longer the case. See Diachronic Change.

4 Contractions for plural personal pronouns are common mainly in the southern dialect of Tamalin. While still acceptable in northern Tamalin, it is more customary to use *mil* instead. Generally, this is thought to be a result of more conservative culture within the more isolated communities in the central north, as the discrepancy does not occur in the northern port cities.

	tiruir → 'from the cup'
-(a)nta	Instrumental/Vialis: denotes causation or method ahjanta → 'By the hand' mbethanta → 'By way of the forest'
-(t)uve	Intransitive: denotes between or amidst weituve → 'between the trees' syluve → 'among the stars'
-(t)uva	Subessive: denotes upon or on quetuva → 'upon the sea' kasuva → 'upon the stone'
-(t)ella	Ornative: denotes possession or endowment. ahjatella → 'having a hand' artonella → 'endowed with an knife'
-(t)ese	Distributive: denotes "for each" or "per". este mazetese → 'food for each person' linda finese → 'one ninth'
-(l)ima	Essive: denotes position or location. Kallembethima → 'at kallembeth'

Pronouns

Tamalin has a set of four singular pronouns for first, second, and third (animate and inanimate) person. Historically, second person pronouns were differentiated by familiarity, with the familiar *enwa las* and the unfamiliar *tau*, but *tau* was dropped, and *enwa las* became just *las*. The third person inanimate pronoun, *mela*, can not be used to refer to people or animals, but may refer to plants or foliage. Each of the pronouns has a plural "contraction" form that can be used as an alternative to the plural particle *mil*.

Person	Singular	Plural Contraction
1 st	o	om
2 nd	las	-
3 rd Animate	er	erim
3 rd Inanimate	mela	melam

Indefinite Pronouns

In Tamélin, there one indefinite pronoun: *joe*, approximately equivalent to 'one'

or 'he who'. For example: *yoe le koro vyme korenje* 'one who destroys shall be destroyed'.

Other Pronouns

	this	that	any	no	some	every	query
place	<i>im</i>	<i>arim</i>	<i>inim</i>	<i>enim</i>	<i>wenim</i>	<i>nenim</i>	<i>quim</i>
thing	<i>or</i>	<i>aror</i>	<i>inor</i>	<i>enor</i>	<i>wenor</i>	<i>nenor</i>	<i>quar</i>
reason	<i>fe</i>	<i>arfe</i>	<i>imfe</i>	<i>emfe</i>	<i>wemfe</i>	<i>nemfe</i>	<i>quanta</i>
person	<i>es</i>	<i>ares</i>	<i>ines</i>	<i>enes</i>	<i>wenes</i>	<i>nenes</i>	<i>ques</i>
time	<i>li</i>	<i>arli</i>	<i>ilni</i>	<i>elni</i>	<i>welni</i>	<i>nelni</i>	<i>quil</i>

Adjectives and Modifiers

In Tamalin, adjectives modify nouns, verbs, and other adjectives. Adjectives generally follow the element they modify in no particular order.⁵ Any number of adjectives may modify the same head, and they do not have to agree in any way with the elements they modify.

(1) ustúi sithe púros
wind cold cruel
“cruel, cold wind”

(2) pail-av lai
lead-INF good
“to lead well”

Demonstrative

Tamalin demonstratives follow the head word of a phrase, after plurality and number (if applicable), but typically before descriptive adjectives, though they behave like adjectives by all counts. Tamalin demonstratives are the same as the demonstrative pronouns; the correct demonstrative could feasibly replace the head noun as a pronoun.

(3) arun im
place here
“this place”

(4) arun arim
place there
“that place”

(5) nefe or
foot this
“this foot”

(6) nefe aror
foot that
“that foot”

⁵ Exceptions frequently occur in poetry, where word order is somewhat flexible. Additionally, compound words formed from adjectives generally are ordered head right, so modifiers will precede the elements they modify.

Verbs

Tamalin verbs are inflected for person, tense, and optionally, aspect and mood. Verbs come in three varieties: *-av*, *-yv*, and *-or*. Taken with these endings, a verb is an infinitive. For example: *sovor*: to separate, *emyv*: to have, *sylor*: to see.

Verb phrases are of the form:

verb [modifiers]

Tense

Tense is indicated by an infix in the verb that replaces the final consonant of the infinitive root (i.e, the *v* in *-av* or *-yv*, or the *r* in *-or*). Verbs conjugated for tense are treated as stems to be inflected with a suffix for person.

	Past	Present	Future
General	-l- <i>tor</i> → <i>tol-</i>	(none) <i>tor</i> → <i>tor-</i>	-m- <i>tor</i> → <i>tom-</i>
Near	-ll- <i>tor</i> → <i>toll-</i>	-	-mm- <i>tor</i> → <i>tomm-</i>

Aspect

Aspect may be indicated with an additional infix following the tense of a verb. The two aspects in tamalin are progressive (an action is ongoing) and perfective (an action is completed).

Progressive: *-w-*

tola 'I ran' → *tolwa* 'I was running'

toma 'I will run' → *tomwa* 'I will be running'

Perfective: *-j-*

tola 'I ran' → *tolja* 'I had run'

toma 'I will run' → *tomja* 'I will have run'

Optative Mood

Tamalin can optionally take an optative mood, indicated desire or wishes, by using the infix *-rj-* in the place of an infix to indicate tense. Therefore, verbs in the optative mood have no associated tense.

tor 'run' → *torjan* 'may you run'

Person

Tamalin verbs are affixed with a suffix to indicate person. Generally, when a verb is inflected for person, and preceding pronoun in the subject may be assumed and therefore may be omitted (though it is not necessarily required). However,

there is no plural/non-plural distinction in inflected on the verb.

Person	Suffix
1 st	-a
2 nd	-an(i) ⁶
3 rd Animate	-o
3 rd Inanimate	-et
Null	-i

The following are example conjugations of the verb *tor* (“to run”) in the present tense:

tora ‘I run’

toran(i) ‘you run’

toro ‘he/she runs’

toret ‘it runs’

Null Person

In addition to the four personal affixes, Tamalin has a fifth verb affix for null person. The null person indicates either (a) unknown subject, (b) that the subject exists in the predicate, or (c) politeness when making a suggestion.

Unknown Subject

Null person is used in sentences where the verb's subject is unknown, such as when asking a question that utilizes an interrogative pronoun as the subject.

(7) *ques eo-m-i tume*
 who ascend-fut- \emptyset mountain
 “Who will go up the mountain?”

Predicate Subject

Occasionally the subject of a sentence will be in the predicate, usually in an explicit construction. When this happens, the verb is affixed with the null person.

(8) *vir-i ekie*
 be.prs- \emptyset house
 “There is a house.”

⁶ The second person suffix may be either *-an* or *-ani*. *-an* is generally considered less formal, and is used more often than *-ani*. Generally, *-ani* would be used only when speaking directly to God or someone who has died. See Appendix 2: Politeness.

Making a Suggestion

The *-i* inflection can be used on verbs to mark suggestion, where the speaker is already understood from context. For example, to suggest “Lets go” it is appropriate to affix the verb root *mor* (“to go”) with the suffix *-i*, making *mori*. In this context, *-i* is similar to the Chinese particle word *ba*.

Participles

In Tamalin, the present participle is denoted with the suffix *-os*, which is affixed to verbs before the ending. For example, the verb *kuidor* 'to touch' will become *kuidos* 'touching' in its present participle form.

Similarly, the past participle is represented by the suffix *-eth*, which is applied to a verbal stem. For example, *evor* 'to loose' becomes *eveth* 'lost' and *hav* 'to die' becomes *heth* 'dead'.

Irregularity and Vyv

Naturally, Tamalin exhibits some irregularity in verb forms, though it is considerably less prominent than in other languages. Perhaps the most important example is the verb *vyv* (“to be”). *Vyv* takes a series of different forms in the present tense across the spectrum of person:

Person	Form
First	vira
Second	viran
Third Animate	viro
Third Inanimate	ven
Null	vir

All other forms of *vyv* are regular.

Verb Framing

Verb framing in Tamalin, which specified the directionality of a verb, is accomplished by prefixing verbs (which encode mode of motion) with directional prefixes, such as *eo-* ‘up’ *ge-* ‘down’.

tor ‘run’ → *eotor* ‘run up’

mor ‘to go’ → *gemor* ‘go down’

Of course, some verbs already encode this information, such as *angor* ‘to fall (down)’ or *eor* ‘to rise or go up’.

Numbers and Counting

Tamalin uses a base ten number system. The digits from one to ten are:

- 1: lin
- 2: nen
- 3: kel
- 4: so
- 5: kan
- 6: ais
- 7: pen
- 8: hano
- 9: fin
- 10: jan

Counting is similar to the system in Mandarin Chinese. For example, *jan-lin* 'eleven', *jan-nen* 'twelve', *nen-jan* 'twenty', *kel-jan* 'thirty', *kel-jan-kan* 'thirty five'. This pattern is followed up to 99 (*fin-jan-fin*). Ordinal numbers are formed with the suffix *-da*. The ordinal numbers from one to ten are: *linda*, *nenda*, *kelda*, *sona*, *kanda*, *erda*, *penda*, *hanona*, *finda*, *janda*.

After 99, *kain* is one hundred. Using *kain*, one can count to 9999 (*finjanfinkain-finjanfin*). 10,000 is *jai*.

Fractions

Fractions are indicated using the distributive case on the denominator while the numerator is marked as an ordinal number. To use ordinal fractions, the suffix *-da* is placed on the the end of the denominator, before the distributive case ending, such as in *linda nendatese* ("one halfth").

- (9) nenda kel-ese
second three-DISTR
"two thirds"
- (10) jan nenda jan kan-ese
ten second five-DISTR
"twelve fifteenths"

Syntax

Sentence and Phrase Structure

In Tamalin, a sentence consists minimally of a single verb phrase.

Tamalin is a head left language, and generally all phrases begin with their head element.

XP → X det Adj XP

S → NP VP

S → VP NP

Tamalin sentences generally follow either an SVO or SOV structure. Most sentences are SVO; SOV sentences can only be used with the singular personal pronouns in objective case. For example:

(11) *sylor-a las → na sylor-a*
see-1.an 2.an → 2.an.do see-1.an
"I see you."

(12) *lammo-r-an o-nonde → ai lammo-r-an*
sing-prs-an 1.an-ben → 1.io sing-prs-2.an
"Sing to me."

The direct and indirect cases of the personal pronouns are as follows:

Person	Direct	Indirect
1	nai	ai
2	na	a
3 Animate	ne	e
3 Inanimate	ni	i

Determiners

Determiners follow directly after the head word of the phrase they modify:

XP → X (det) (Adj) (

E *aio-l-a sur tir aror*
3.io give-pst-1 also cup that
"I also gave him that cup."

Questions

Questions in Tamalin follow the same word order patterns used to make statements, but the element in question is replaced with an interrogative pronoun.

(13) weto-lm-an quar
do-pres.prog-2 what
"What are you doing?"

(14) Quim eo-mo-l-i tume
who up-go-pst-0 mountain
"Who went up the mountain?"

When transliterated to the Roman alphabet, questions are preceded by an upside down question mark (¿) and punctuated by a question mark (?). For example: ¿*Las seá?* ("How are you?").

Polar Questions

Any statement can be turned into a yes/no question with the polar particle *m*. By adding an *m* to the end of a complete statement, the speaker indicates that they expect a simple boolean response reflecting the veracity of the statement.

(15) quaidhor-an Tamélin m
understand.prs-2 Tamalin prt.q
"Do you understand Tamalin?"

(16) nai lammor-an m
1.io sing.prs-2 prt.q
"Will you sing for me?"

The responses 'yes' and 'no' in Tamalin are *lja*⁷ and *men*, respectively. For example:

(17) umor-an im m
dwell-2 here prt.q
"Do you live here?"

(18) lja umor-a im
yes dwell-1 here
"Yes, I live here"

men umor-a men im
no dwell-1 not here
"No, I don't live here."

Negatives

The particle word *men* means 'no', 'not', or 'none'. When used after a verb or adjective, the meaning is negated. When used following a noun, it acts as a quantifier indicating none. It can also be used to say 'No.'

⁷ Alternatively, *ja* is equivalent to *lja*, though it is somewhat less formal.

malyv 'to bind' > *malyv men* 'to not bind'

maie 'warm' > *maie men* 'not warm'

syl 'star' > *syl men* 'no star(s)'

Voice

Tamalin does not have a passive or an anti-passive voice, as a result of no distinction of animacy. The language also lacks any special syntax for reflexives.

(19) *arton nai karno-l-et*
knife me cut-pst-3.inan
"a knife cut me"

(20) *karno-l-a o*
cut-pst-1 l
"I cut me"

Strengthening

Strengthening of meaning is conveyed in Tamélin in one of two ways: reduplication or the adjective *te*.

masa 'bad' →

masa te 'very bad'

mamasa 'extremely bad'

sithe 'cold' →

sithe te 'very cold'

sisithe 'freezing'

Copula

In Tamalin, the linkage of a subject to some adjective or modifier does not require a verb. Instead a sentence will consist of the subject, followed by its modifiers.

(21) *limmeth sithe te.*
Today cold very.
Today is very cold.

However, if the subject is represented by a pronoun, copula is not used, and the appropriately conjugated form of *vyv* ('to be') will be preferred.

(22) *vir-a ev-eth*
be-1 lost-pp
"I'm lost"

Comparative

Comparative phrases are constructed using the particle *hwi*, which is placed between the elements being compared. The aspect of comparison, generally an adjective following the elements, is suffixed with a postfix that indicates the degree of the comparison of the first element relative to the second; *-hja* (both elements are equal), *-mja* (first element exhibits a greater degree), and *-lja* (first element exhibits a lesser degree).

(23) *llan hwi ira gela-hja*
year PTC river quick-COMP
“the years are as fast as the river”

(24) *syl hwi lota viem-mja*
star PTC cloud high-COMP
‘the stars are higher than the clouds’

(25) *wei hwi syl viel-lja*
tree PTC star high-COMP
“the trees are lower than the stars”

Superlative

To indicate a superlative noun phrase, the suffixes *-mja* and *-lja* are postfixed to the adjective with no other comparative noun present:

syl kirómja → ‘the brightest star’

wei hailja → ‘the least large tree’

Conditionality

Tamalin conditional sentences are expressed using the construct *yt* [protasis] *he* [apodosis], where the protasis is the condition, and the apodosis is the result. It is similar to the English construct If [this] then [that]. For example:

Yt haman he vyma enyl. ‘If you die, **then** I will be sad.’

Yt miralo men he ve enwa halo. ‘If he had not come, **then** his friends would have died.’

Relative Clauses and Complement Clauses

In Tamalin, relative and complement clauses begin the particle *le*, and follow the element they modify. Generally, these clauses come at the end of the phrase they modify.

Relative Clause

Ira [le mindavet silweluir] ‘the river [that flows from the west]’

Maze [le sylola] miralo vai ekie. ‘The person [that you saw] came to my house.’

Complement Clause

Quaidhora men [le viro quim]. 'I do not know [where he is]'

Úrre molo [le mui umoro]. 'The dog went to [where the cat lives]'

It is worth noting that in relative clauses, verbs must be inflected for person to agree with the element that the clause modifies.

Conjunctions with Le

Occasionally, *le* appears following conjunctions. In these cases, *le* is a part of the conjunctions and provides no other special syntactic or semantic meaning. For example:

pan le → '(at the same time) as'

pan le dorma eoret o mil estoma 'as the sun rises, we will eat'

Derivational Morphology

Derivational changes are generally implemented via a simple suffix appended directly to the root word. Some suffixes preserve word class, while others bring roots into other classes. On verbs, derivational suffixes replace the infinitive suffix *-or*, *-av*, *-yv*.

Following is a table of common derivational affixes:

Affix	Meaning	Example
-elda	Agent (v → n)	wetelda 'doer'
-elfa	(n → adj)	pelenelfa 'kingly'
-aha	(adj → noun)	aiavaha 'sweetness'
-on	(adj → adj)	sainon 'endless'
-aro	(n → n)	elaro 'crystalline'
-mi	(adj → adj)	lústemi 'fearful'
eku-	Performative (v → v)	ekudhamava 'I hereby declare'

Diachronic Change

Tamalin words are derived from a series of abstract roots. Usually, the roots embody abstract concepts or meanings, from which words can be formed through the combination of roots and the use of loosely defined affixes.

For example, the root *TAT represents meanings such as 'tangled', 'tied', or 'woven'. Words derived from this root include:

- *tatsa 'net' (*tasta*)
- *tator 'to tangle'
- *mastate 'lie' (from *MAS 'bad' and *TAT)
- *tatma 'knot' (*tanta*)

A variety of affixes are loosely associated with certain concepts. Many of the affixes have are associated with either the animate or inanimate genders. A few of the most common examples are:

- -e: animate gender, intangible things, landforms, body parts
*NEP 'foot' > *nepe 'foot' (*nefe*)
- -a: inanimate gender, objects
*HON 'thorn; thistle' > *hona 'thorn'
- -ma: derivational (more specific, inanimate)
*JEN 'silver' > *jenma 'moon' (*jenna*)
- -me: more specific, animate
*GWA 'bless' > *gwame 'redemption' or 'cleansing of sin'
- -ro: derivational (a related state)
*LIN 'one' > linro 'alone' (*lirno*)

Appendix 1: Textual Examples

Baveltule (The Tower of Babel)

This is a translation and interlinear glossing of the account of the Tower of Babel translated from Genesis (Bible Gateway, NIV).

Quin inene vy-l-et amma-tar lin mana mmore-tar lin.
World all be-pst-3.inan language-gen one and speech-gen one.
And the whole earth was of one language, and of one speech.

Pan le haldo-l-o lim-uir er-im agwa-l-o
In time that journey-pst-3.an east-abl 3.an-pl find-pst-3.an
And it came to pass, as they journeyed from the east, that they

language world-gen and there-abl God 3.an.do scatter-pst-3.an

there confound the language of all the earth: and from thence did

mes-uva quin-ar inene.

face-subé world-gen all.

the LORD scatter them abroad upon the face of all the earth.

Rynlámhar

Rynlámhar is a short, nonsensical children's song about a bird similar to the common loon known as a *laúio*.

¡A Rynlámhar, lámhar telo ryn!

¿Molani quim, a lam-lam?

¡Na evola elen quen uilos!

¿Faisoran jennaluir m?

Little bird, little grey bird,

Where did you go, birdy?

I lost you in shimmering waters.

Do you hide from the moon?

¡A Rynlámhar, lámhar telo ryn!

¿Molani quim, a lam-lam?

¡Hwindora las mannos enyl,

le val meiquos tovaluir!

Little bird, little grey bird,

Where did you go, birdy?

I hear you crying sadly,

a lamenting voice from afar.

¡A Rynlámhar, lámhar telo ryn!

¿Molani quim, a lam-lam?

¡A ljavani osi lirno te,

elen wyse azelar!

Little bird, little grey bird,

Where did you go, birdy?

O, come back to me so alone

in the night-time shadows.

¡A Rynlámhar, lámhar telo ryn!

¿Molani quim, a lam-lam?

Súforan va hywe mil telo.

¡Nailori jennasi!

Little bird, little grey bird,

Where did you go, birdy?

Flap your grey wings.

Fly to the moon!

Nenor ven men le Foret

Gai ge syl te kiró mil,

umora weivelon,

elen karja amber mil,

jeníar mana gendol.

Deep under stars so bright,

We dwell among the the trees,

in days pale,

of silver and gold.

Pan le ryníra mindoret,

sovorenje ve alimuir.

Arton mil le angoret,

Ustúi mar ni embavet.

In the time that the brook flows,

separated from their fathers,

the leaves that fell,

the wind ancient carries them.

Pan le enkí akariár,

jena elo angoret,

In the time that the moonbeams of

night

jena elo heingar,
le karjet jení karja.

Engais gaiwin siloret,
gai ge ama mana kar,
Nenor ven men le foret.

the purple veil falls,
the adornment of the purple veil,
the silver day.

The roots grow deep,
deep below life and light,
not all is as it seems.

Appendix 2: Pragmatics

Tamalin has very few politeness structures built-in due to a lack of formality in culture. In Tamalin culture, it is inappropriate to use formal language in most situations. A highly egalitarian such as the Tamélinin has little use for emotional distancing, which is considered rude. Formal tongue is used mainly in religion or in relation to the spiritual, such as when praying or talking about religion, God, or someone who is dead.

Politeness or impoliteness is generally judged on basis of openness and friendliness in conversation. A typical conversation may proceed as follows:

¡Nen, enwa!

Nen, vira elenya na sylvor. ¿Las seá?

Vira lai te, tul emyva ljanjo. ¿Nai ailljoman⁸ quen m?

Lja.

Telai.

Translation:

Hello, friend!

Hello, I'm happy to see you. How are you doing?

I am well, but I'm thirsty. Will you give me some water?

Yes.

Thank you.

⁸ Though translated as “give” in this text, it is worth noting that the verb *ailljor* (infinitive of *ailljoman*) actually means “to give as a gift”. So when asking for something it is common to ask for it as a gift if you aren't going to pay for it.

Appendix 3: Naming Conventions

Names are formed from words, generally affixed with *-in*, i.e., *Tamélin* from *Tamel* and *Kírin* from *Kir*.

Compound Names

Compound names are generally formed by concatenating words, modifier first. For example:

Aiekarsylórinquesintule from *aie*, *kar*, *sylórin*, *quesing*, and *tule*.

Quenvainwil from *quen*, *vain*, and *wil*.

Syljennýlamme from *syl*, *jenní*, and *lamme*.

Cultural Conventions

In Tamalin culture an adult individual has three names: a birth name, and family name, and a self-name. Upon birth every child is given a birth name, which is chosen by the parents and will be used by the child until they become an adult. Upon becoming an adult, the child chooses a new name for himself. The adult name must be based on a deep self-understanding, and be a representation of the true nature of a persons being and personality. Adulthood is officially confirmed through this revelation of self-awareness and choice of name, regardless of what age it occurs at.

Once an adult name is chosen, the person is referred from there on by that name, and the birth name becomes the second or middle name.

Válin Kósyl Kirowe
[adult] [birth] [family]
